

Product Name :
Automatic Fish Filleting Machine

Product Code :
MM-CHINA11002-001

Description :

Automatic Fish Filleting Machine

Technical Specification :

The Automatic Fish Filleting Machine is designed for high-efficiency processing of various fish species, including salmon, tilapia, cod, pangasius, and mackerel. It automates scaling, gutting, filleting, and trimming, producing uniform fish fillets with minimal waste.

Key Advantages:

- High automation and consistent output
- Reduces manual labor and processing time
- Produces uniform, boneless fillets suitable for freezing, packaging, or further processing
- Hygienic design compliant with international food safety standards

Main Features

- High Automation
- PLC or touch-screen control for easy operation
- Automated feeding, scaling, gutting, filleting, and trimming

Versatile Application

- Suitable for salmon, tilapia, cod, pangasius, mackerel, and other medium to large fish
- Adjustable fillet thickness and trimming length

Hygienic Construction

- Stainless steel SS304/316 contact parts

CIP (Cleaning-in-Place) compatible
Smooth surfaces reduce bacterial growth

Efficient Production
High processing speed: 300–1200 fish/hour depending on model
Minimal fillet loss, ensuring higher yield

Safety & User-Friendly
Safety guards and emergency stop functions
Simple blade replacement and maintenance
