

Product Name :
Automatic Bone Crushing Machine

Product Code :
MM-CHINA11002-0019

Description :

Automatic Bone Crushing Machine

Technical Specification :

Introduction of Bone Crushing Machine

The Bone Crushing Machine is a highly efficient and innovative grinding equipment designed for crushing all types of bones.

It effectively reduces bone size to a range of 5-80mm.

This machine boasts a simple operating system, a compact structure, and easy maintenance and cleaning procedures.

It offers stable operation, high production capacity, and produces fine bone granules.

Features of Bone Crushing Machine

The parts contact with materials adopts high-quality stainless steel, stable and durable, superior wear resistance and long service life, no pollution, meeting the food hygienic requirements.

Grinding head is made of high-quality alloy steel with a special heat treatment, superior wear resistance, sharpening blunt multiple, repeated use and long service life.

Turret optimum design, tool dispersed by force, improve the individual blades shear force and the impact force resistance.

Adopts the front blade design to increase blade cutting angle to improve the cutting efficiency, grinding particles uniformly.

The feeding hopper noise processing, stainless steel material, the mute effect is good.

Can be used together with the conveyor belt, the automation in and out of the material, and reduce the dynamic strength.

It is simple to operate, convenient to clean and maintenance, reducing costs, increasing production capacity, and

improving elasticity.
