

Product Name :
Vacuum Stuffing Machine

Product Code :
MM-CHINA11002-0027

Description :

Vacuum Stuffing Machine

Technical Specification :

Our mixer is engineered with an advanced double-shaft twisted auger design, ensuring thorough blending without any unreachable corners, thereby optimizing mixing efficiency. Constructed entirely from high-quality stainless steel, it not only guarantees durability but also meets stringent hygiene standards essential for food and pharmaceutical industries.

The innovative dual-axis dual frequency conversion design allows for precise speed adjustments tailored to different material characteristics and processing requirements. This flexibility ensures optimal mixing performance across a wide range of applications.

Driven by a direct connection through a robust reducer, our mixer effortlessly handles materials of varying viscosities, maintaining consistent and reliable operation. The inverter, supplied by Schneider of France, provides dependable control and efficiency.

Our product line encompasses a comprehensive range of capacities, including 300L, 500L, 750L, 1200L, and 1600L, catering to diverse production scales and industry needs. Each model is designed to deliver superior mixing results, enhancing productivity and product quality.
