

Product Name :
Patty Maker Machine

Product Code :
MM-CHINA11002-0040

Description :

Patty Maker Machine

Technical Specification :

The Patty Maker Machine is a high-speed, automatic forming system that converts ground meat, poultry mince, fish paste, or plant-based blends into dimensionally uniform, weight-controlled patties at sustained rates of up to 4200 pieces per hour. In Quick Service Restaurant (QSR) supply chains, where a single patty weight deviation of more than 3 grams triggers batch rejection by the distributor, mechanical consistency is not a luxury.

The achieves +/- 1.5 gram portion accuracy across continuous 8-hour production shifts by combining a positive-displacement vane pump filling system with precision-machined rotary mold cavities.

Every patty that exits this machine is visually identical, dimensionally stable, and ready for direct paper interleaving, IQF tunnel freezing, and retail or foodservice packaging.

Maximum Output Rate: 4200 patties/hour (Single Lane)

Patty Weight Range: 30 g - 250 g

Weight Accuracy: +/- 1.5 g

Patty Diameter Range: 80 mm - 130 mm (Interchangeable Dies)

Patty Thickness Range: 6 mm - 25 mm (Adjustable)

Hopper Capacity: 80 Liters

Fill System: Positive-Displacement Vane Pump

Drive Power: 3.0 KW (Total)

Construction: Frame / Contact Parts
