

Product Name :
Cooking Drying Oven

Product Code :
MM-CHINA11002-0041

Description :

Cooking Drying Oven

Technical Specification :

This drying oven is made of polished 304 stainless steel and features imported insulating materials for superior heat retention.

The PID temperature controller ensures precise regulation within $\pm 1^{\circ}\text{C}$.

Imported hot air circulation fans provide even heat distribution.

Multiple standard drying racks meet various needs.

The user-friendly touchscreen interface allows easy programming of temperature and time parameters.

Rapid preheating guarantees uniform temperature distribution.

The insulated structure lowers surface temperature, conserving energy and enhancing safety.

The thoughtfully designed internal space can accommodate large drying batches.

Suitable for both food dehydration and laboratory sample drying, this oven includes overtemperature protection to prevent abnormal temperature rises.

Made from high-quality materials with meticulous craftsmanship, it is an excellent choice for food processing and laboratory applications.

The automatic cooking and drying oven is suitable for the cooking, maturation and drying of various meat sausages, thousand-page tofu, fish tofu, ham, chicken nuggets, seafood and other products.

The circulating air flow based on RUNFLOW technology provides uniform ventilation, which effectively guarantees the consistency of product heating. Adopt time or central temperature control mode, optional temperature recording and printing system, central monitoring, remote maintenance function.

It adopts modular box structure and flexible arrangement.

It can be arranged in a single row or a double row, the cart can be entered and exited in one direction, or it can be made into a channel type front and rear door, and the raw and cooked area interlocking device is added. The polyurethane foamed wallboard is used for excellent thermal insulation performance.

High-quality and reliable silicone door seal structure.

Easy cart structure. Supporting components of world-renowned brands.

Upon request, a cooking temperature greater than 100 degrees can be provided
