

Product Name :
Industrial Frozen Meat Slicing Machine

Product Code :
MM-CHINA11002-0065

Description :

Industrial Frozen Meat Slicing Machine

Technical Specification :

The most devastating bottleneck in massive industrial meat facilities is the 24-to-48-hour thawing cycle required to temper standard -18° frozen meat blocks. This extended static duration fundamentally drains factory floor space, spikes electricity costs, and creates massive drip-loss pools where bacterial payloads multiply out of control. This Industrial Frozen Meat Slicing Machine entirely circumvents the thawing mandate.

By attacking perfectly solid, deep-frozen protein blocks with unprecedented kinetic force, the system violently shaves the meat directly into workable slices. This immediate structural reduction secures maximum raw meat, halts drip-loss entirely, and instantly feeds your downstream bowl cutters or grinders.

Engineered for extreme rendering shifts, the chassis is an immovable 700 kg fortress of 304 stainless steel. Driven by an unyielding 11 KW internal gearbox, this machine swallows entire standard commercial frozen blocks via a massive 510x210mm intake portal, executing continuous throughputs of up to 4 metric tons every single hour.

Maximum Volumetric Capacity: 3.0 to 4.0 Tons / h (Dictated by frozen block density)

Material Delivery Slot Dimensions: 510 mm Width x 210 mm Height (Fits standard industry blocks)

Continuous Power Requirement: 11.0 KW (High-torque low-RPM reduction drive)

Primary Structural Alloy: 304 Food-Grade Stainless Steel (Full frame and contact zones)

Total Assembly Weight: 700 kg (Aggressively weighted for zero-vibration)
