

Product Name :
Small Ultrasonic Cutting Machine

Product Code :
MM-CHINA11003-007

Description :

Small Ultrasonic Cutting Machine

Technical Specification :

As a leading industrial manufacturer, we understand that traditional mechanical slicing often leads to product deformation, "smearing" of multi-layered cakes, and significant waste in small-to-medium scale production environments.

Our Small Ultrasonic Cutting Machine is engineered to eliminate these bottlenecks by utilizing 20kHz/40kHz high-frequency vibrations that significantly reduce friction between the product and the blade.

This professional-grade, compact solution is designed specifically for central kitchens, R&D labs, and specialized bakeries requiring surgical precision without the footprint of a full industrial line.

Zero-Friction Technology: Titanium alloy horn vibrating at 20,000 cycles per second prevents product adhesion.

Hygienic Engineering: Full SUS304 stainless steel construction meeting BRC and USDA washdown standards.

High Precision: Servo-driven positioning system ensures portion weight consistency within $\pm 1\%$.
