

Product Name :
Biscuit Making Machine

Product Code :
MM-CHINA11003-0013

Description :

Biscuit Making Machine

Technical Specification :

The Commercial Biscuit Making Machine is designed for continuous industrial production of biscuits, including butter biscuits, cream-filled biscuits, sandwich cookies, and crackers. It integrates dough mixing, sheet rolling, cutting, baking, cooling, and packaging into a seamless production process.

With rising global demand for packaged baked goods, this machine ensures consistent quality, high productivity, and compliance with international food safety standards (HACCP, ISO22000, FDA).

Working Principle

Dough Preparation & Mixing

Ingredients such as flour, sugar, butter, eggs, and milk powder are mixed into a uniform dough.
Optional addition of chocolate, flavors, or nuts.

Sheeting & Rolling

Dough is rolled into sheets of consistent thickness using adjustable rollers.
Ensures uniform biscuit thickness for even baking.

Cutting & Molding

Rotary molders, wire-cut, or stamping machines shape biscuits into various forms.
Options for embossed patterns or perforations for decorative or functional purposes.

Baking

Tunnel ovens with multi-zone temperature control ensure even baking.
Baking time and temperature are adjustable for different biscuit types.

Cooling & Packaging

After baking, biscuits are cooled gradually to prevent breakage.

Automatic packing into trays, bags, or flow wrappers.

Advantages of this workflow:

Automated process from dough to packaging

Adjustable settings for different biscuit types

Consistent shape, color, and texture

Reduced labor and production costs
