

Product Name :
Dual-Roll Steamed Bun Machine

Product Code :
MM-CHINA11003-0016

Description :

Dual-Roll Steamed Bun Machine

Technical Specification :

The Dual-Roll Steamed Bun Machine is a fully automatic dough forming system designed for high-efficiency production of steamed buns, mantou, dough balls, and pre-shaped rolls. Utilizing advanced dual-roll extrusion and rolling technology, it mimics the traditional hand-kneading process to produce buns with a smooth, round shape, fine internal texture, and excellent elasticity — close to handmade quality.

Ideal for central kitchens, canteens, fast-food chains, and food processing plants, this machine dramatically improves productivity while reducing labor costs.

Key Features & Benefits

Dual-Roll Forming Technology – Near-Handmade Quality

Counter-rotating rollers compress and roll the dough to develop gluten naturally, resulting in soft, fluffy buns with a professional finish.

High Output & Stable Performance

Capacity: 600–3000 buns per hour (adjustable by size)

Continuous operation with minimal downtime

Can be integrated with mixers, proofers, and steamers for a full automated production line

Variable Frequency Speed Control – Easy Operation

Equipped with frequency inverter to precisely adjust bun size (Ø40–100mm, 50–150g) and production speed.

Simple one-button operation — no skilled labor required.

Food-Grade Stainless Steel Construction

All contact parts made of stainless steel — hygienic, corrosion-resistant, and easy to clean. Meets international food safety standards.

Compact Design & Easy Maintenance

Modular structure allows quick disassembly of rollers and scrapers for thorough cleaning. Low maintenance and long service life.

Energy-Efficient & Quiet Operation

Low power consumption (1.1kW–2.2kW), low noise, and stable performance — perfect for continuous use in commercial environments.

Multiple Models & Customization Options

Countertop or floor-standing models

Single or dual outlet configurations

Voltage adaptable (220V/380V, 50Hz/60Hz)

OEM/ODM supported for global clients
