

Product Name :
Dough Roller Machine

Product Code :
MM-CHINA11003-0027

Description :

Dough Roller Machine

Technical Specification :

Attempting to manually pin or rigidly extrude complex laminated pastry doughs routinely results in shattered butter layers, extreme gluten toughening, and disastrously inconsistent baking volumes. Engineered exclusively for elite bakeries and high-volume central commissaries, our commercial reversible dough roller (sheeter) machine fundamentally guarantees microscopic thickness control.

Driven by a relentless 1.5KW reversible electric motor and equipped with dual high-friction polyurethane (PU) conveyor belts, this massive floor-standing system forcefully reduces colossal dough blocks into perfectly smooth, continuous sheets ranging from a bulky 40mm down to a translucent 1mm, safeguarding the delicate architectural layers of your premium croissants, puff pastries, and danishes.
