

Product Name :
AP Series Flake Ice Machine

Product Code :
MM-CHINA11004-004

Description :

AP Series Flake Ice Machine

Technical Specification :

The AP Series Flake Ice Machines are designed to produce thin, fast-cooling flake ice, offering large surface area for rapid cooling.

This type of ice is widely favored for applications in supermarkets, hotels, seafood processing plants, vegetable processing facilities, laboratories, schools, hospitals, and other industries requiring high-quality ice for cooling and preservation.

The machines adopt advanced microcomputer control systems to ensure fully automated operation, stable performance, and user-friendly management. Optimized with high-efficiency compressors and refrigeration systems, the AP Series achieves superior energy-saving performance while maintaining reliable ice output.

Rapid Cooling & Efficient Performance

Thin flake ice offers a larger surface area, ensuring fast cooling and preservation.

High-capacity continuous ice output meets demands of diverse industries.

User-Friendly Operation

Control button interface for easy monitoring and operation of the ice-making process.

Fully automatic microcomputer control system with auto ice-making and auto-alarm functions for operational safety and convenience.

Energy-Saving & Durable Design

Equipped with internationally recognized brand compressors for enhanced energy efficiency and system

stability.

Optimized refrigeration design reduces energy consumption while maintaining stable output.

Hygienic & Safe

Evaporators made from one-piece die-cast aluminum alloy for high durability and low failure rates.

Fully enclosed structure ensures clean and sanitary ice production.
