

**Product Name :**  
Canned Fruit Production Line Equipment

**Product Code :**  
MM-CHINA11005-0011

**Description :**

Canned Fruit Production Line Equipment

**Technical Specification :**

**Raw Fruit Receiving and Sorting**

Fresh fruits such as peach, pineapple, pear, mango, or mixed fruit are inspected and sorted by size and quality.

**Washing and Peeling**

Air bubble washer and high-pressure spray system remove dirt and residues.

Optional peeling machine (steam, lye, or mechanical) ensures smooth and clean fruit surfaces.

**Cutting and Coring**

Automatic cutting machines process fruits into slices, cubes, or halves according to recipe requirements.

**Blanching and Cooling**

Hot water or steam blanching keeps fruit color, flavor, and texture before filling.

**Syrup Preparation and Filling**

Syrup tank with precise temperature control prepares sugar solution.

Automatic filling machine adds fruit and syrup accurately to cans or jars.

**Seaming and Sterilization**

Vacuum seamer ensures air-tight closure.

Retort sterilizer or pasteurizer guarantees long shelf life and product safety.

---

#### Cooling, Labeling, and Packaging

Rapid cooling tunnel prevents overcooking.

Automatic labeling and case packing complete the process.

#### Key Equipment in the Canned Fruit Production Line

Fruit Washing Machine (Bubble + Spray type) – Removes soil and pesticide residues efficiently.

Fruit Peeling & Coring Machine – Customizable for different fruit types.

Fruit Cutting Machine – Slices, dices, or halves fruits with adjustable thickness.

Syrup Preparation Tank – With heating, mixing, and temperature control system.

Filling Machine – Automatic filling with accurate syrup and fruit ratio.

Vacuum Seaming Machine – Ensures tight sealing and long preservation.

Retort Sterilizer – Steam or water spray sterilization to meet export safety standards.

Cooling Conveyor & Labeling Machine – For final cooling and labeling operations.
