

Product Name :
Fruit Pitting and Pulping Machine

Product Code :
EQUP-MC20088-0009

Description :

Fruit Pitting and Pulping Machine

Technical Specification :

Product performance characteristics

1. This machine is used for beating, peeling and enucleation of fruits and vegetables. It is mainly suitable for denucleating pulping after pre-cooking or eight mature stone fruits. The pulp, slag and core are automatically separated, and the core is peeled and peeled. Separation of the pulp. It is suitable for the processing of stone fruit fruits such as mango, apricot, peach and plum.
2. Automatic cleaning interface, built-in multi-angle sprinkler, high degree of cleaning automation;
3. The overall frame and the contact part with the material are made of high quality 304 stainless steel material;
4. The movable door of the nuclear outlet is designed with a unique hinge mechanism, and the cleaning and replacement of the screen is extremely convenient;
5. The equipment is stable in operation and can be installed on the assembly line for automated production;

Description	Dimensions(mm)	Suggested capacity	Suggested power
		The capacity and power are determined on different raw fruits	
All made of SUS304 stainless steel, Rotating at 960- 1350 rpm	1170x1000x1250	2t/h	5.5
